

Utility Search Electricity Capacity Report

The Electrical Capacity Report provides an early assessment of the electricity capacity headroom in the local electricity network. This report serves as a valuable tool for land agents and development planners to understand the capability of the existing electricity network to serve new projects.

OVERVIEW

The UK electrical grid is a complex dynamic system undergoing rapid change as we upgrade to support increased demand for electricity. Premier Energy are regularly seeing the impact of electricity capacity availability on the viability, design, and development of projects across the country. The Electricity Capacity Report has been designed to meet the need for early insight into electrical capacity. It provides a snapshot of capacity in the vicinity of your project and includes a RAG assessment of the potential risks associated with a new electricity connection: both the Network Headroom and Competing Enquiries that may be looking to connect in the area.

WHO NEEDS AN ELECTRICAL CAPACITY STATUS REPORT?

- Development planners
- Land agents
- Commercial property agents
- Land owners

WHY CHOOSE US?

- Independent unbiased advice
- Free ongoing telephone and email support
- Operating in the UK utility industry since 1995
- Dedicated team of utility professionals

PRICE

£795

TURNAROUND TIME

- 🕒 Available in 5 working days

REPORT FEATURES

- 🔗 Accesses latest Distribution Network Operator data
- 🔗 Risk summary of Network Headroom availability
- 🔗 Assessment on level of interest from other applicants
- 🔗 Clear overview map identifying location and capacity status of key substations
